AMERICAN**

**Argo  
BASEBOARD**

**EMBASSY  
INDUSTRIES  
INC.**

*DesignLine*

**Petite**

**STERLING  
RESIDENTIAL BASEBOARDS**

Through the use of a two phase state-of-the-art manufacturing process Mestek, Inc. has taken the esthetically pleasing and clean-heat performance of residential baseboards to unprecedented levels of durability.

During phase one all critical components of the baseboard including the vane, front and back plates are "hot-dipped" galvanized through an environmentally friendly no-lead process increasing rust corrosion resistance above that of traditional processes. Phase two incorporates a beautiful paint finish process which further increases corrosion resistance and durability providing users with a life-time solution to their hydronic heating needs.

Mestek's versatile hydronic heating products are the perfect solution for all areas of the home including high moisture areas such as kitchens, bathrooms and even basements.
